

Aegean Migrant Solidarity Covid Protocol

- Members of the team, delegations, visitors and others who are hosted by AMS team, must abide by the requirements and recommendations of the health authorities in Lesvos and the Hellenic Republic.
- For now there are no requirements to have a negative PCR test, vaccination certificate or such documentation for entry into the Hellenic Republic. However, it is highly recommended that you get the necessary vaccinations against COVID - 19, both to protect yourself and other people. For more information you can always check: Protocol for Arrivals in Greece - travel.gov.gr, as the requirements have changed upon your arrival.
- If a member of the team, a delegate, or a guest of the team gets positive test results of COVID - 19, then:
 - Has to stay in isolation for at least 5 days and avoid contact with other people.
 - The person can come out of isolation after the end of the 5 days or symptoms improve after the 5 days with complete remission of fever for 24 hours. We recommend the person to get another rapid test, before getting out of the isolation.
 - The person has to use a high protection mask (N95 or FFP2) for at least another (5) days after termination of isolation.
